

MOHAMMAD TAJI

Software engineer

Frontend by job title, Node.js backend from the later roles on.

Mashhad, Iran · m.taji1381@gmail.com · 09158293988 · [linkedin.com/in/mr-tag2](https://www.linkedin.com/in/mr-tag2)

SUMMARY

Hired as a frontend developer, and kept designing and building the Node.js services next to that work. Recent role is backend only. The work is private client systems, described here without product names: inquiries, payments, device traffic, messaging, and commerce.

EXPERIENCE

Wingsnovaa · wingsnovaa.ir

Aug 2024 – present

Backend developer. Part-time remote until Jun 2025, then full-time. The part-time months overlapped the team-lead role below. Public UI belonged to other people, including a Flutter app.

- Inquiry and billing API: plate and history lookups, an identity check, wallet, coupons, and several Iranian payment gateways.
- Device backend with two channels: a short telemetry intake from the device, and a separate socket for the mobile client. A queue clears transient state and sends notifications.
- Aggregation API: pulled listings from outside sources, normalized skills, and matched them to the user. Plans, tickets, and payment sat on the same service.
- Event backend: halls, tickets, staff assignment, wallet, and sockets, plus a separate shop service.
- Multi-service backend: messaging, tasks, CRM, warehouse, and organization structure.
- Points and rewards API for a consumer mobile product. Counted activity and calculated points and gift codes. The mobile app was another team's Flutter client.

Arvin Vira · arvinvira.com

Sep 2022 – Jun 2025

Frontend developer, then frontend team lead from Apr 2023.

- Led the frontend team. Screens covered commerce, warehouse, production, learning, and an internal workflow inbox.
- Owned the analysis beside the UI: what the API should accept and return.
- Built a visual editor for flows and layouts, and the API behind that editor.
- Shop administration, an internal organization panel, and a health product for practitioners and their clients.
- React, then Next.js. Set component standards and mentored juniors.

ParsAlphabet · Frontend developer

Feb 2021 – May 2022

- Frontend on a large automation platform, from jQuery to React.
- Patient admission screens, including medication and prescription steps aligned to health-authority documents.
- Accounting, warehouse, and workflow-inbox screens.
- Kiosk UI for card read and call-up. The kiosk backend was someone else.

Prkimia · Full-stack developer

Jun 2019 – Feb 2021

- C# MVC, SQL Server (heavy queries and functions), jQuery, and Bootstrap.
- Business systems across food service, hospital operations, nursing records, warehouse, accounting, and group travel.
- Print output with Crystal Reports and Stimulsoft.

SKILLS

Backend: NestJS, Node.js, TypeScript, Express, REST, WebSocket, PostgreSQL, MongoDB, SQL Server, Redis, queues

Frontend: React, Next.js, TypeScript

Delivery: Docker, CI, Nginx, payments, identity checks, FTP uploads

Practice: system analysis, code review, mentoring

EDUCATION

Ferdows Institute of Higher Education

Graduated Feb 2026

Bachelor's degree, computer software engineering.

Sadjad University of Technology

Associate degree.
